

KS II Grab for road plate handling

BSV has developed a grab for safe handling of road plates.

The grab can be used for soil, sand and other materials and also to handle road plates. This is possible because all BSV's KS grabs are equipped with an integrated check valve located inside the cylinder. Therefore, the load is retained even in case of a hydraulic hose failure on the crane.

The grab is available in various sizes: 385, 500 or 700 liter and offered as a closed grab, a grab with open and removable end plates, these can be installed without use of hand tools.

This grab is constructed with a low installation height and a large opening width.

BSV grab for road plate handling

Specifications / Type		385G	500G	700G	530GSX	700GSX
Volume	L	385	500	700	530	700
